SUMMARY

Computer Engineering student with 2+ years of experience at an international SaaS product company, where I built internal tools, automation frameworks, and monitoring systems in production, with measurable impact on platform efficiency and reliability. Now focused on backend development: I built CulturalExchange, a REST API in Python/FastAPI with JWT authentication and a relational data model. Comfortable with REST APIs, Git, CI/CD, SQL, and object-oriented programming in Python and Java, and I pick up new technologies quickly.

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, SQL, C++

Backend & APIs: FastAPI, REST APIs, ORM (SQLModel/SQLAlchemy), JWT/OAuth2 authentication, object-oriented programming, data modeling

Databases & Tools: PostgreSQL, SQLite, Git, CI/CD pipelines, version control & code review

Fundamentals: Computer architecture, data structures & algorithms, linear algebra, calculus

Spoken languages: Portuguese (native), English (professional — 2+ years at a U.S. company)

PROFESSIONAL EXPERIENCE

Quality Assurance Engineer

Apr 2024 – Jun 2026

TestBox — Remote (United States) · roles: QA Tester → Associate QA Engineer → Associate Data Engineer

- Designed and built an internal tool that automated the reading and verification of components in a web application, cutting a manual process from roughly 10 hours to 1 hour.
- Built an automated monitoring system that ran daily against the platform of the company's largest client, collecting end-to-end metrics, detecting out-of-range values, and firing alerts — turning incident detection from reactive into proactive.
- Developed and maintained automation frameworks in TypeScript and Node.js, applying clean-code, reuse, and maintainability principles.
- Integrated automated runs into CI/CD pipelines, supporting faster and more reliable deployment cycles.
- Investigated and resolved issues in production, reproducing failures, analyzing root cause, and validating fixes together with the development team.
- Performed data collection, cleaning, and processing, and updated and maintained database tables using SQL.

PROJECTS

CulturalExchange — REST API Platform

Personal project

github.com/YasmimAr/culturalexchange

- Backend REST API in Python (FastAPI, SQLModel) for managing youth exchange opportunities, with a relational data model (PostgreSQL/SQLite) and auto-generated interactive documentation (Swagger).
- Implemented JWT/OAuth2 authentication, role- and ownership-based authorization, full CRUD for users, camps, and applications, combinable search filters, and business rules enforced in the application layer.

EletroQuad — Extracurricular Autonomous Drone Project

Competition team

- Team project building a competition drone from scratch. I work across both hardware and software, contributing to the programming of the control system with a focus on autonomous flight.

Cache Memory Simulator — Python

Academic project

github.com/YasmimAr/cache-simulator

- Cache memory simulator with mapping and replacement policies, with Git version control and technical documentation in scientific-paper format.

EDUCATION

B.Sc. in Computer Engineering

Oct 2023 – Dec 2028 (expected)

Universidade de Caxias do Sul (UCS) — Caxias do Sul, RS, Brazil

EXTRACURRICULAR

LEO Club — Lions Clubs International

7 years

- Volunteer work designing and facilitating training sessions for groups of up to 70 participants, developing communication, teamwork, and collaborative leadership.
